

# Explore a Food Web

Food webs explain how everyone in an ecosystem gets energy, either from the sun like a plant, or from their food.

## Keywords

Producer: organisms that use the sun for energy.

Consumer: organisms that eat other organisms.

Take a look at the food web on the next page and answer the following questions.

1. What is one of the producers in this food web?
2. What are three consumers in this food web?

Now take a look outside. Food webs exist everywhere, in every ecosystem. Can you find any producers in your neighborhood? How about any consumers?

Try drawing them out below!
